INDOOR AIR QUALITY

In order to ensure that all school buildings have adequate indoor air quality, the Salem School Board directs the Superintendent to address methods of minimizing or eliminating emissions from buses, cars, delivery vehicles, and other motorized vehicles. The Superintendent may delegate the implementation of these methods to the Director of Maintenance. The Board encourages the use of methods and recommendations established by various State agencies and the Town of Salem Health Inspection Official.

In addition to addressing methods eliminating emissions, building principals and/or the Director of Maintenance are directed to annually investigate air quality in their respective school buildings using a checklist provided by the New Hampshire Department of Education.

In support of this policy, the Superintendent is authorized to establish regulations and/or administrative rules necessary to implement anti-idling and clear air measures aimed at improving indoor air quality.
