FOLDABLE

These foldables are part of our enVision math program. We use them full group and during small group instruction.

They are two-sided: one side is the “game board” side (the side that has a place for the student’s name). This is the side we spend most of our time using because it is “hands-on”. The other side is the independent practice side.

There will be times that your child may not finish the independent side at school. We will still put it in their home-to-school communication folder to be sent home. You may choose to have your child complete it at home or just discard it. That is your choice. They do not need to be returned to school.

The other take-home piece is a Home-School Connection for each TOPIC we cover. These are for your information only and do not need to be returned to school.
